INCREASE YOUR CHARGING SPEED

There is a little trick to get your phone to charge quicker. You can easily speed up the charging by simply switching off the phone.

But, if you don't want to switch OFF the phone and still want to double the charging speed, then simply swipe your finger down to show the notification bar and put the phone in Aeroplane Mode (it could also be called 'Airplane mode' or 'Flight mode')

This one simple trick will help to increase the Charging Speed even if you don't have a fast charger or if your phone does not support fast charging usually.

Pretty cool tip to help when your battery is low!
